

TI Instructions

How to perform basic statistics calculation:

Steps	Instructions	Screen Shots
1	Press STAT	
2	Press ENTER	
3	Key in 12, 23, 17, 25, 18, 18, 23, 32, 16, and 24. Make sure to press ENTER after each one to store the data into L1 .	
4	Press STAT , then arrow to the right once.	
5	Press ENTER to select 1:1-VAR Stats .	

6	Press 2nd 1 to select L1		1-Var Stats L1
7	Press ENTER to perform the calculation.		1-Var Stats $\bar{x}=20.8$ $\Sigma x=208$ $\Sigma x^2=4620$ $Sx=5.711586664$ $\sigma x=5.418486874$ $\downarrow n=10$
8	Arrow down several times to view the rest of the calculations.		1-Var Stats $\uparrow n=10$ $\text{min}X=12$ $Q_1=17$ $\text{Med}=20.5$ $Q_3=24$ $\text{max}X=32$

1. If the data is considered a sample, then sample mean is \bar{x} and sample standard deviation is S_x .
2. If the data is considered a population, then population mean is μ and population standard deviation is σ_x .
3. The Five-Point Summary which are used in constructing the Box Plot can be obtained from the last screen in this calculation.
4. The Inter-Quartile Range IQR can be computed by finding the difference $Q_3 - Q_1$.
